Academic Projects

WATCH HUB — E-Commerce Watch Store Apr 2025 – May 2025

- Built a premium mobile shopping app with secure login, watch browsing, filtering, wishlists, cart management, user profile, and in-app support using Flutter and Firebase.
- Designed an admin panel for managing products, users, and reviews. Implemented smooth UX, real-time feedback, and responsive UI optimized for performance.

EGREETINGS

- Developed a dynamic eGreetings website using .NET Framework for sending online greeting cards.

- Enabled users to send customized cards to up to 10 email addresses via subscription management functionality.

COVID VACCINATION MANAGEMENT SYSTEM

- Developed a dynamic website using PHP and MySQL for online testing and vaccination management.
- Implemented role-based access for Hospital, User, and Admin with features for viewing reports online and scheduling vaccinations.

SAFECARZ LIMITED

- Developed a front-end car insurance website using HTML, CSS, and JavaScript with a responsive design for user-friendly navigation.
